

**Griform Innovations<sup>®</sup>, Inc.**  
**Threshold Installation**

Items you will need: Denatured Alcohol  
Clean Lint Free Cloth  
100% Silicone Adhesive  
Something to Use For Weight

1. Thoroughly vacuum or sweep the area where the threshold is to be placed.
2. With denatured alcohol and a clean white cloth thoroughly clean the area.
3. Lay a few ¼" beads of silicone adhesive on the back of the threshold. Place the threshold in place and firmly push down evenly along the threshold to ensure that the adhesive comes in contact with the floor.
4. Place weight bags or something heavy on the threshold until the silicone sets. Follow the recommended curing instructions on the tube of the silicone.

## Care and Maintenance

The inherent qualities of Corian<sup>®</sup> solid surfaces ensure the ultimate in easy care and renewability. Its nonporous, solid composition makes it easy to live and work with for many years.

- Routine Care
- Preventing Heat and Other Damage
- Removing Stains and Fixing Scratches or Burns

## Routine Care

Routine daily care and maintenance of Corian<sup>®</sup> is easy. But, because cleaning practices differ around the world, please consult your local supplier of Corian<sup>®</sup> for specific recommended care and maintenance practices and products. Use the following procedures as a guide to everyday care for Corian<sup>®</sup> solid surfaces:

- There are three types of countertop finish: matte, semi-gloss and gloss.
- All Corian<sup>®</sup> sinks and GRIFORM<sup>®</sup> Shower Bases have the matte finish.
- Soapy water or ammonia-based cleaners will remove most dirt and stains from all types of finishes.
- However, slightly different techniques must be used to remove difficult stains, depending on the finish. Please contact your source for Corian<sup>®</sup> for more information.

## Preventing Heat and Other Damage

Although Corian<sup>®</sup> is quite resistant to heat; you should always use a hot pad or a trivet with rubber feet to protect Corian<sup>®</sup>. Hot pans, as well as some heat-generating appliances like frying pans or electric cooking pots, can damage the surface if a hot pad or trivet is not used.

- In most cases, Corian<sup>®</sup> can be repaired if it is accidentally damaged. However, be sure to follow these guidelines to prevent any permanent damage to Corian<sup>®</sup>.
- Avoid exposing Corian<sup>®</sup> to strong chemicals, such as paint removers, oven cleaners, etc. If contact occurs, quickly flush the surface with water.
- Remove nail polish with a non-acetone-based polish remover and flush with water.
- Do not cut directly on Corian<sup>®</sup> countertops.

## Removing Stains and Fixing Scratches or Burns

Nicks, scratches and cuts are inevitable with any high-use product, including Corian<sup>®</sup>. But because Corian<sup>®</sup> is solid all the way through, it is easy to renew to its original appearance as described below.

Minor damage, including scratches, general or chemical stains, scorches or burns, and minor impact marks, can be repaired on-site with a light abrasive cleanser and a product such as a Scotch-Brite<sup>®</sup> pad. For heavier damage, light sanding may be necessary. The following steps should be followed:

- Identify the extent of the damage and ascertain whether a minor repair will solve the problem. You may want to consult with your supplier of Corian<sup>®</sup>.
- If the damage is minor, try to repair it with an abrasive cleanser or a product such as a Scotch-Brite<sup>®</sup> pad.
- If the above step is unsuccessful, hand-sand with 400-grit wet and dry paper. To minimize dust, wet the surface before starting.
- If this is unsuccessful, use an electric sander and heavier-grit paper. Always make provisions to control dust.
- If this, too, is unsuccessful, you may need to consult a professional for other repair options. In this case, contact your supplier of Corian<sup>®</sup> for assistance.

## Renewing Corian<sup>®</sup>

Nicks. Stains. Cuts. Scratches. While these can permanently mar most other surfaces, they won't compromise the appearance of Corian<sup>®</sup> solid surfaces. That's because it's easy to restore Corian<sup>®</sup> to its original state, using an ordinary abrasive cleanser and a cleansing pad such as a green Scotch-Brite<sup>®</sup> pad. And, if damage does occur, Corian<sup>®</sup> can be repaired on site, saving both downtime and aggravation.
